What It Does

Daily Shift Reports

Pulls every shift leader's submission from yesterday — trade feedback, guest experience, operations notes, rostering, and star of the shift — formatted into a professional HTML email per venue.

Star Champions Leaderboard

Tracks month-to-date "Star of the Shift" nominations and ranks the top 3 team members per venue with Gold, Silver, and Bronze medals.

AI-Powered Insights

Claude Haiku analyses each venue's daily comments and 7-day history to surface key issues and recurring trends — giving managers an instant executive summary.

Venue-Specific Delivery

Each email is sent from the venue's own shared mailbox to configured recipients. Venue lists, senders, and recipients are managed via a simple Excel file on SharePoint.

How It Works

Technology Stack

Azure Functions
Serverless compute — runs the daily timer and Python code

Microsoft Graph API
Reads SharePoint data and sends emails via Exchange

SharePoint Online
Stores shift submissions (list) and config (Excel file)

Claude AI (Haiku 4.5)
Low-cost AI model generating daily insights and trend analysis

Exchange Online
Sends from each venue's shared mailbox

Python 3.11
Business logic, data processing, and HTML email templating

Monthly Cost Estimate

SERVICE	WHAT FOR	MONTHLY COST (AUD)
Azure Functions (B1 Plan)	Hosting the function app with Always On for reliable daily triggers	~\$19
Azure Storage	Timer state, function metadata, deployment files	~\$1

SERVICE	WHAT FOR	MONTHLY COST (AUD)
Claude AI (Haiku 4.5)	73 AI summaries/day x 30 days = ~2,190 calls/month (low token usage)	~\$3-5
Microsoft 365	SharePoint, Exchange, Graph API — included in existing Yo-Chi subscription	\$0
Application Insights	Logging and monitoring (free tier covers this volume)	\$0
Estimated Total Monthly Cost		~\$23-25 AUD

What Else Could This Platform Do?

The same architecture (Azure Functions + SharePoint + Graph API + Claude AI) can be reused for other automated workflows:

Weekly Performance Digest

Aggregate the full week's data per venue and send a Monday morning summary with AI-generated performance commentary, sales trends, and improvement recommendations.

Email AI

Automated Roster Alerts

Monitor rostering feedback for understaffing mentions and automatically flag venues that need additional cover to area managers before the next shift.

Alert AI

Guest Feedback Escalation

Use AI to scan guest experience comments for negative sentiment or complaints and immediately escalate to the operations team — not waiting until the next morning.

Real-time AI

Monthly Operations Report

Auto-generate an end-of-month PDF report per venue or region with charts, top performers, recurring issues, and AI-written executive summary for leadership.

Report AI

Sales Anomaly Detection

Compare daily sales against historical averages and alert when a venue is significantly under or over performing — catching issues like equipment failures or unexpected rushes.

Analytics AI

Supplier & Stock Alerts

Monitor operations feedback for stock-out mentions (flavours, toppings) and auto-notify suppliers or procurement team with a reorder request.

Supply Chain Automation

Training Gap Identifier

AI analyses feedback patterns across venues to identify recurring operational mistakes, then suggests targeted training topics for area managers to address.

HR AI

Cross-Venue Benchmarking

Compare all venues against each other on key metrics — stars awarded, feedback sentiment, sales consistency — and generate a national leaderboard email for leadership.
